q.Analytics℠

Executive Information System

A web-based application that analyzes company performance and medical expenses, reports results, and helps to stay in line with company strategy and objectives.

Enrollment shows its historical trends by product and health plan. It provides enrollment information by region and compares the actual enrollment with the projected one.

Cash Flow presents cash outflow on a weekly and monthly basis by different components of expense. It compares cash outflow to the budgeted cash flow and provides historical data.

Expense compares your organization's actual experience with the budget cash and per member per month (PMPM) basis for each of the expense components. Further details are available comparing claims by specialty, specialty cap, PCP cap and overall administrative expenses. The historical trends are compared by specialty.

Utilization and Operational Reports identify deficiencies in managing members' health and reaching periodical goals. Customized reports empower management to deal with daily challenges and provide cost-effective and quality care.

To effectively manage health care organization, a superb information and reporting system is needed. That is why we created q.Analytics.

Starting with the customized **Dashboard** that summarizes company's overall performance, q.Analytics features: Enrollment, Cash Flow, Expense and Reporting module to provide operational and financial details. To better support decision making, q.Analytics superimposes current data over their historical and projected values.

- illustrates company's financial and operational performance
- enables organization to align performance with strategy
- helps employees understand their roles and set priorities
- provides tools to identify and manage financial and clinical shortfalls

We understand that every organization is unique. That is why q.Analytics offers customizable dashboards and scorecards ready to display your most critical information on the fly. Further in-depth analysis is supported by a number of views that display data by: region or department, member or invoice level, or actual or budgeted expense.

HEALTHCARE DATA SOLUTIONS ("HDS") is a healthcare software solution developer focused on addressing medical providers' and health plans' needs to manage the quality of care and related health care financing as well as administration.
