

A web-based application that consolidates, analyzes, and manages member-specific health data.

Health Information Depot

offers capability of storing and moving clinical information among disparate health care settings. It facilitates access to and retrieval of clinical data to provide safer, timelier, and more efficient patient care.

Member Health Summary

turns all available patient data into an easy to comprehend page, including patients' care and disease history and a list of outstanding quality measures.

Prevalence Analysis

compares members' risk-adjusted data with their fee-for-service (FFS) county equivalent. It helps to identify potential areas of miscoding and assess its financial impact.

Members by Disease Group

module enables creating custom lists of members diagnosed with a specific condition or a combination of conditions that occurred in the specified period of time.

Miscellaneous

section of q.Health offers additional tools in form of charts and statistics that help to better understand patients' specific characteristics.

Through complex data collection and consolidation, q.Health brings a concept of meaningful use to your practice. Compact member summaries help physicians to better assess their patients' conditions while saving time otherwise spent on browsing through multiple data sources. In addition, q.Health assists administrators in better understanding and planning for population-specific care programs.

Member Summary Page											
12/22/2011											
Amador, Emily			PCP ID: 68050695PCP			PCP Name: Girgis, Bahaa

4011		Essential Hypertension, Benign		Y	-	-		Soap: Soap-Clinic			

- collects and consolidates patients' health data
- allows providers to quickly access and exchange patient-specific, information
- improves HCC documentation and compliance with selected quality measures
- helps to define health profile of served population and adjust care plans and resources accordingly

We understand that every organization is unique. That is why q.Health is scalable and designed to work with even very limited data. As your organization and medical library grows, q.Health automatically fills in blanks and adds details to member health summaries and available reports.

HEALTHCARE DATA SOLUTIONS ("HDS") is a healthcare software solution developer focused on addressing medical providers' and health plans' needs to manage the quality of care and related health care financing as well as administration.
