

A web-based application that improves quality and effectiveness of care by assuring compliance with the set of proposed measures.

Summary by Measures

provides a list of HEDIS measures selected by the user-defined filter. The number of compliant and non-compliant members is indicated for each measure, as well as the current score and the benchmark.

Summary by Health Plan and PCP

reports selected HEDIS measures with their respective scores obtained for every contracted health plan and physician. The current scores are superimposed over historical data and the benchmark. Further drill-down capabilities provide member details and PCP contribution to the obtained scores.

Monthly Trend Report

provides a list of selected HEDIS measures with their respective scores obtained each month so that the performance trend can be noted.

Adding/Updating Measures and Exclusions

q.Metrics updates HEDIS information and reporting automatically based on the claims data. Users can also update measures and exclusions manually through q.Metrics application.

q.Metrics provides analytical tools that support healthcare reimbursement models based on quality measures. Focused on the **HEDIS** measures related to the Star and Pay-for-Performance (P4P) programs for senior and commercial population, q.Metrics helps to improve member health, quality scores and financial results while engaging patients in their healthcare.

Please discuss the following quality and preventive care services with your physician today.

Recommended Quality and Preventive Care Service(s):

Annual Doctor Visit
 Glaucoma Eye Exam by an Optometrist
 Influenza Vaccination
 Pneumonia Vaccination

If you have had any of the above services performed elsewhere during the current year, please bring copies of the reports, so that the physician has a complete set of your medical records.

- £ collects, manages and reports clinical measurements
- £ identifies areas of low performance on the health plan, group, physician or measure level
- £ notifies physicians about member-specific outstanding measures at the point of care
- £ involves patients in a process of assuring compliance (with selected quality measures)

We understand that every organization is unique. That is why q.Metrics compiles multiple sources of clinical and administrative data to increase compliance rate and members' well-being without need to reorganize your company's current database structure.
